PROJECT REPORT

TITLE : CONTACT BOOK

Submitted by :	B. Geethika
Submitted to :	Global Quest Technologies
Date :	20 April 2026

ABSTRACT

The Contact Book is a Python-based application designed to store and manage personal contact information efficiently. The main objective of this project is to provide a simple system where users can add, view, search, update, and delete contact details.

This application allows users to store information such as name, phone number, and email address using data structures like dictionaries. The system enables quick retrieval of contact details through search functionality and also allows updating and deleting records as needed.

The project is implemented using basic Python programming concepts such as functions, loops, conditional statements, and dictionaries. It demonstrates how data can be organized and managed effectively in a real-world scenario.

Overall, the Contact Book application helps users maintain their contact information in an organized manner and serves as a foundation for more advanced database-driven applications.
