PROJECT REPORT

TITLE : EXPENSE TRACKER

Submitted by : B. Geethika

Submitted to : Global Quest Technologies

Date : 20 April 2026

ABSTRACT

The Expense Tracker is a Python-based application developed to help users efficiently manage and monitor their daily expenses. The main objective of this project is to provide a simple and user-friendly system to record, view, search, and delete expense details.

This application allows users to enter information such as expense name, category, amount, and date. The data is stored temporarily during program execution and can be displayed in an organized format. The system also calculates the total expenditure, helping users understand their spending patterns.

The project is implemented using basic Python concepts such as lists, dictionaries, loops, and conditional statements. It demonstrates fundamental programming skills along with practical problem-solving abilities.

Overall, the Expense Tracker helps users maintain financial discipline by keeping track of their expenses and provides a foundation for developing more advanced financial management systems.
